Continuation of 11. does NOT place the application in condition for allowance because: Applicant's arguments filed 05 June 2008 have been fully considered but are not persuasive. As previously discussed and as seen in the figures previously cited, the arcuate member, e.g. 46, is planar and extends in a plane and includes a cross section and ends that extend through a natural aperture in the preexisting profile of a vertebra (i.e. proximate the lamina and between the spinous and transverse processes. It is noted that an aperture may simply be an opening or gap allowing passage. The aforementioned location allows passage of the arcuate member. In addition, the member extends between remaining adjacent vertebrae (see, e.g., Fig. 1).
